

POMPE GRUPPO 3

OT OilTechnology è una giovane azienda, costituita nel novembre del 2001 , che produce nell'hinterland di Parma una valida gamma di pompe ad ingranaggi esterni.

Dal punto di vista tecnico OT OilTechnology ha realizzato un progetto " aggiornato " che è la sintesi delle esperienze applicative e delle nuove esigenze di mercato.

Le chiavi del successo di OT sono:

- **SERVIZIO:** Un servizio esemplare e flessibile per caratterizzare l'azienda.
- **QUALITA':** Costante monitoraggio del processo produttivo e adeguato collaudo finale prodotto al 100% per assicurare la migliore qualità'.
- **PREZZO:** Bassi costi di struttura uniti ad un processo produttivo efficiente per garantire prezzi competitivi.
- **PROPORSI E DIVENIRE PARTNER DEI PROPRI CLIENTI:** questa è la **MISSION** di OT OilTechnology.

GROUP 3 PUMPS

OT OilTechnology is a young Company, founded in November 2001, which makes a comprehensive range of external gear pumps.

From the technical side OT Oiltechnology has realized an "up-to date" project that is in line with the new needs of the market.

The OT key to succes is the following:

- **SERVICE:** A very good service, higly flexible, most important attribute of the Company.
- **QUALITY:** Costant quality control and 100% product resting to achieve the best results possible from our working processes.
- **PRICE:** Low overheads together with an efficient working process to offer competitive prices.
- **TO BE A PARTNER OF OUR CUSTOMERS:** This is the **MISSION** of OT OilTechnology.

POMPE GRUPPO 3

GROUP 3 PUMPS

POMPE GRUPPO 3

CARATTERISTICHE COSTRUTTIVE

<i>PARTI</i>	<i>MATERIALE</i>	<i>CARATTERISTICHE</i>
<i>INGRANAGGI</i>	Acciaio da cement. UNI 7846	Rs= 1250 N/mm ² Rm= 1450 N/mm ²
<i>FLANGIA E COPERCHIO</i>	Ghisa G25 / G30	Rs= 300 N/mm ² Rm= 450 N/mm ²
<i>RASAMENTI</i>	Avional Boccole autolubrificanti DU	Rs= 350 N/mm ² Rm= 390 N/mm ²
<i>CORPO POMPA</i>	Estruso Lega serie 7020 trattato termicamente	Rs= 350 N/mm ² Rm= 390 N/mm ²
<i>GUARNIZIONI</i>	Acrilnitrile standard Viton	90 Shore, resistenza termica 120°C 80 Shore, resistenza termica 200°C
<i>ANTIESTRUSORI</i>	Zitel	Caricato con fibra di vetro

Rs= Carico di snervamento.

Rm= Carico di rottura

CARATTERISTICHE GENERALI:

Pressioni massime fino a 300 bar.

Pesi : da 8,2 Kg a 10,5 kg

Regimi di rotazione fino a 3000 giri/min.

Alberi disponibili: Conico 1x8 con linguetta a disco.
Sae B-13 denti , Sae cilindrico Ø22,2

Versioni con flangieri: Standard europeo.
SAE "B".

Cilindrata da 22 cc/giro a 90 cc/giro.

Le cilindrata disponibili sono espresse nel seguente schema

TRASCINAMENTO

Il collegamento della pompa al motore deve essere realizzato con un giunto che, durante la rotazione, non trasferisca alcuna forza radiale e/o assiale.

In questo caso sarebbe inevitabile una rapida usura delle parti interne in movimento con conseguente decadimento delle prestazioni stesse della pompa.

Se il moto viene trasmesso alla pompa a mezzo di ingranaggi, cinghie o catene e' necessario montare il supporto per trasmissione indipendente.

GROUP 3 PUMPS

CONSTRUCTIVE CHARACTERISTICS:

<i>PART</i>	<i>MATERIAL</i>	<i>CHARACTERISTICS</i>
<i>GEARS</i>	Hardened steel UNI 7846	Rs= 1250 N/mm ² Rm= 1450 N/mm ²
<i>FLANGE AND COVER</i>	G25 / G30 cast iron	Rs= 300 N/mm ² Rm= 450 N/mm ²
<i>BEARINGS</i>	Avional Bearings with DU	Rs= 350 N/mm ² Rm= 390 N/mm ²
<i>BODY</i>	Etruded In aluminium alloy Series 7020	Rs= 350 N/mm ² Rm= 390 N/mm ²
<i>O-RINGS</i>	Buna N Viton	90 Shore, up to 90°C 80 Shore, for high temperature
<i>ANTIEXTRUSION</i>	Zitel	With glass fibres

Rs= Enervation load

Rm= Breaking load

GENERAL CHARACTERISTICS:

Maximum pressures up to 300 bar.

Weight : from 8,2 Kg to 10,5 kg

Maximum speed up to 3.000 rpm.

Type of shafts: Taper 1:8
SAE B splined-13 teeth
SAE B cylindrical - Ø22.2

Type of flanges: European standard
SAE A standard.

Displacements from 22 cc/rev to 90 cc/rev.

The displacements are available according this table:

DRIVE:

The connection of the pump to the motor must be done preferably with the use of a flexible coupling to avoid any radial and/or axial force on the shaft, otherwise pump efficiency will dramatically drop due to early wear of inner moving parts.

In any applications where the motion is transmitted through belts, it is necessary to use a support to avoid any radial or axial load to the pump shaft.

POMPE GRUPPO 3

CONDIZIONI DI IMPIEGO- PRESTAZIONI LIMITE

In normali condizioni di funzionamento, nel condotto di aspirazione rileviamo una leggera depressione, cioè in normale utilizzo la pressione di alimentazione è minore di quella atmosferica.
Il campo di pressioni di esercizio in alimentazione deve rispettare i seguenti valori:

Min. 0.75 bar (assoluti)

MAX 2,0 bar (assoluti)

Per valori di funzionamento con pressione in ingresso maggiore di quella Max, indicata è necessario contattare il nostro ufficio tecnico.

I valori di pressione massima "P1" sono riferiti al funzionamento continuo a 1500 giri/1' con fluidi idraulici normali con viscosità min = 10 cST.

Per valori più gravosi sia di regime che di viscosità (alta temperatura) è necessario diminuire la P1.

La normale definizione delle pressioni di lavoro o ammesse è riportata nella seguente tabella:

Per un regolare funzionamento i regimi di rotazione non debbono superare i valori max indicati, e riportati nelle relative tabelle, così come il regime minimo di rotazione non deve essere inferiore al seguente valore:

Min. = 400 giri/1'

Max = (vedi tabelle)

DEFINIZIONE DEL SENSO DI ROTAZIONE GUARDANDO L'ALBERO DI TRASCINAMENTO

GROUP 3 PUMPS

WORKING CONDITIONS- LIMIT PERFORMANCES

In normal working conditions there must be, in the suction pipe, a pressure lower than the atmospheric pressure.

The pressure range in suction must be:

Min. 0.75 bar (absolute)

MAX 2,0 bar (absolute)

The maximum pressure values "P1" are referred to a continuous working at 1500 rpm with standard hydraulic fluids with minimum viscosity of 10 cSt.

For heavier working conditions (viscosity or high temperature) it is necessary to reduce the "P1" values.

In the following table are described the admitted pressures:

The standard working speeds (minimum and maximum) are the following:

Min. = 400 rpm

Max = (See following table)

DIRECTION OF ROTATION LOOKING AT THE SHAFT:

POMPE GRUPPO 3

FILTRAZIONE FLUIDO

E' ormai provato che la maggior parte dei prematuri cali di prestazione delle pompe e' dovuto al loro funzionamento in condizioni di filtrazione scorretta.

La presenza di particelle contaminanti in un fluido idraulico dovuta ad un'inefficace sistema di filtrazione puo' in effetti portare ad un irreparabile danneggiamento degli elementi interni della pompa.

Si raccomanda di porre particolare attenzione alla pulizia dell'impianto, soprattutto in fase di avviamento dello stesso.

L'iniziale contaminazione del fluido deve essere in accordo alla norma ISO 4406 e non dovrebbe superare la classe 19/16 con un filtro 3x75.

E' importante dimensionare il serbatoio in modo tale che abbia una capacita' almeno doppia rispetto al volume di fluido pompato dalla pompa in un minuto di funzionamento.

Sono indicati di seguito i parametri tecnici che e' importante rispettare:

FILTRAGGIO IN INGRESSO	30 / 60 Micron nominali
FILTRAGGIO IN USCITA	10 / 25 Micron assoluti
VELOCITA' MAX IN INGRESSO	0.5 / 1.5 m/s
VELOCITA' MAX IN USCITA	3.0 / 5.5 m/s

In ambienti di lavoro particolarmente inquinati e' particolarmente importante ridurre ulteriormente il filtraggio in uscita e prevedere anche un filtro aria.

FLUIDI IDRAULICI

Si raccomanda l'utilizzo di fluidi esclusivamente progettati per l'impiego in trasmissioni oleodinamiche, tipicamente olio idraulico a base minerale HLP HV (DIN 51524).

Sono indicati di seguito i parametri tecnici che e' importante rispettare:

VISCOSITA' MINIMA	10 mm²/s
VISCOSITA' MASSIMA	100 mm²/s
VISCOSITA' CONSIGLIATA	20 mm²/s / 100 mm²/s
TEMPERATURA CONSIGLIATA	30°C / 50°C
TEMPERATURA DI ESERCIZIO	-15°C / +80°C

Se si impiega Acqua-glicol (HF-C) si devono adottare le seguenti limitazioni: n.giri max 1500 giri/min pressione max 200 bar.

Per impieghi con fluidi ester-fosforici consultare nostro ufficio tecnico.

ISTRUZIONI PER L'ISTALLAZIONE

- Durante il primo avviamento tarare le valvole limitatrici di pressione al minor valore possibile e raggiungere il valore massimo in modo graduale.
- Verificare, nel caso di pompa monodirezionale, che il senso di rotazione sia coerente con quello dell'albero dal quale deriva il moto.
- Controllare che il collegamento tra albero motore e pompa sia corretto, cioe' che non induca a carichi radiali o assiali.
- Evitare partenze sotto carico in condizioni di bassa temperatura o comunque dopo lunghi periodi di inattivita'.
- Verificare che il livello del serbatoio sia adeguato dopo l'installazione di tutta la componentistica.
- Durante il primo avviamento scollegare lo scarico per permettere di spurgare l'aria nel circuito.
- Proteggere l'anello di tenuta della pompa in caso di verniciatura; verificare la pulizia della zona di contatto tra anello di tenuta ed albero; la presenza di polvere puo' accelerare l'usura causare delle perdite.
- E' inoltre importante dotare l'impianto di idonei sistemi di sicurezza atti ad evitare turbolenze nel fluido, in special modo nei condotti di ritorno al serbatoio, e evitare l'entrata in circolo nei sistemi di aria, acqua, o contaminanti di vario genere.
- Verificare sempre che la coppia applicata sia minore o uguale alla coppia ammissibile dell'albero.
- Utilizzare sempre oli ben filtrati, con assenza di acqua o con qualsiasi altra sostanza emulsionante.
- Non far mai girare la pompa con soluzioni olio aria.

GROUP 3 PUMPS

FLUID FILTRATION

It is known that in many cases the premature pump performances reduction is due to a non correct filtration in the circuit.

The presence of contamination particles in the fluid usually corresponds to an irreparable wear of the pump internal parts.

It is recommended to pay attention to the plant cleaning, mainly in the starting activity.

The starting fluid contamination it must be according to the Norms ISO 4406 and it should not exceed the Class 19/16 with a filter 3x75.

Here below the technical parameters to respect:

<i>FILTRATION IN SUCTION LINE</i>	30 / 60 Nominal micron
<i>FILTRATION IN PRESSURE LINE</i>	10 / 25 absolute micron
<i>MAXIMUM SPEED IN SUCTION</i>	0,5 / 1,5 m/s
<i>MAXIMUM SPEED IN OUTPUT</i>	3,0 / 5,5 m/s

Sometime (contaminated places) it is recommended to improve the filtration in pressure line and fit also an air filter.

HYDRAULIC FLUIDS

It is recommended the use of fluids made for hydraulic circuits.

Usually they are hydraulic oils with mineral basis HLP HV (DIN 51524).

Here below the technical parameters to respect

<i>MINIMUM VISCOSITY</i>	10 mm²/s
<i>MAXIMUM VISCOSITY</i>	100 mm²/s
<i>SUGGESTED VISCOSITY</i>	20 mm²/s / 100 mm²/s
<i>SUGGESTED TEMPERATURE</i>	30°C / 50°C
<i>WORKING TEMPERATURE</i>	-15°C / +80°C

For applications with water-glycol (HF-C) it is recommended to consider the following limitations: 1500 rpm maximum speed and 200 bar maximum pressure.

For applications with phosphate ester fluids, please contact our Technical department.

INSTALLATION INSTRUCTION

During the first starting it is recommended:

- to set the maximum pressure relief valves to a low value and gradually increase the pressure.
- to check, with single rotation pumps, that the rotation direction it is correct.
- to check that the connection between the motor and pump shaft is correct, without radial or axial load.
- to avoid starting under pressure in low temperature conditions or after long period of inactivity
- to check the fluid level in the tank
- to disconnect the return pipe and purge any air in the circuit
- to protect the pumpshaft seal when painting power pack
- to use suitable systems in the return lines to tank, to avoid turbulence in the circuit and ingress of air, water or contamination
- to check the torque that must be lower than the maximum torque admissible on the pump shaft
- to use new oil filters with absence of water or any other emulsifying substance
- to avoid starting with a air-oil solution

It is important to specify an oil tank at least twice the flow from the pump.
